

Planting Potatoes

- 1 lb. of potatoes can yield 10-12 mounds, planting them 12-16" apart
- Cut the potato, leaving at least two eyes on each piece
- Dig the hole approximately 6" deep
- Put 1 tbsp. of the **secret ingredient** in the bottom of the hole. Drop the potato with the eyes up and cover.

Secret Ingredient:

BONE MEAL is high in Phosphorus (0-10-0). It breaks down gradually and helps develop a sturdy root system. It also helps stimulate plant growth.
